IX	COMPUTER SCIENCE	Ch – 7 : Input in Java	<p>*The assignments given below have to be done in the Computer Science notebook.</p> <ol style="list-style-type: none"> Name the following <ol style="list-style-type: none"> A package needed to import scanner class A method that accept a character through scanner class A package needed to import Stream Reader class A method that accept an integer token through scanner object Differentiate between the following: <ol style="list-style-type: none"> nextInt() and nextFloat() methods Syntax and logical error Name the methods of scanner class that: <ol style="list-style-type: none"> is used to input an integer data from the standard input stream. is used to input a string data from the standard input stream. Answer the following: <ol style="list-style-type: none"> What is use of the keyword import? What is the package? Give an example. Name any two library package. What do you mean by scanner class?. What are the different types of errors that take place during the execution of a program? What do you understand by 'Run Time' error? Explain with example. Java programming: <ol style="list-style-type: none"> Write a program in java to find the area, perimeter and the diagonal of a square by using assignment statement. Write a program in java to find the area and perimeter of a right angled triangle by using functional argument. Take perpendicular and base as input. Write a program that inputs, calculates and display the average of three numbers. Write a program in java to accept the numbers of days and display it after converting into numbers of years, months and days. Write a program in java to accept Basic salary of an employee. Calculate and display the gross salary and net salary when: <ul style="list-style-type: none"> da = 30 % of basic hra = 12% of basic pf = 10 % of basic gross = basic + da + hra netpay = goss-pf
